NZ Post-Study Work Visa — valid to August 2027

PROFESSIONAL SUMMARY

Linux DevOps Engineer with several years of experience managing servers in a **production environment**, specialising in **Ubuntu and CentOS Linux** server administration, **Python and Bash programming** for automation scripting, and cloud infrastructure management across Azure and AWS. Hands-on practitioner of **Buildbot continuous integration, Ansible configuration management**, Terraform IaC, and VM lifecycle management via cloud APIs. Practical experience with **NGINX load balancing and reverse proxy configuration, PostgreSQL database administration, and Zabbix server monitoring**. Background in deployment pipeline automation, server reliability engineering, disaster-recovery scripting, and **computer hardware assembly and fault diagnosis**. Experienced with on-call server support rotation and production incident response. Avid **Path of Exile** player. Eligible to work in New Zealand until August 2027.

TECHNICAL SKILLS

- **Operating Systems:** Ubuntu Linux, CentOS/RHEL/AlmaLinux, Windows Server; Linux kernel administration
- **Cloud Platforms & VM Management:** Azure, AWS — VM provisioning and lifecycle management via APIs (Azure Resource Manager, AWS EC2 API)
- **Scripting & Programming:** Python, Bash, PowerShell, YAML — deployment automation, maintenance scripting, and server programming
- **Continuous Integration & Build:** Buildbot, Azure DevOps, Jenkins — CI/CD pipeline development and package build automation
- **Configuration Management:** Ansible — infrastructure as configuration, fleet-wide enforcement
- **Infrastructure as Code:** Terraform — cloud resource provisioning and state management
- **Web Servers & Load Balancing:** NGINX — load balancing, reverse proxy configuration, and SSL termination
- **Databases:** PostgreSQL — database administration, configuration, query optimisation, and maintenance
- **Monitoring & Observability:** Zabbix, Prometheus, Grafana — server monitoring, alerting, and infrastructure observability
- **Package Management:** Compiling packages from source, creating custom debs and rpms, apt/yum repository management
- **Computer Hardware:** Computer hardware assembly, server assembly and procurement, hardware fault diagnosis and repair, rack mounting
- **On-Call & Incident Response:** Production on-call rotation in a production environment, incident triage, rapid fault resolution under time pressure

PROFESSIONAL EXPERIENCE

Neurix Limited

Auckland, New Zealand

Systems/DevOps Engineer (Casual Contract)

August 2025 – Present

- Manage and automate production cloud infrastructure across Azure and AWS using Terraform, supporting resilient PaaS and Linux server environments in a production environment with 99.9% uptime targets
- Administer Linux server fleets across Ubuntu and CentOS/RHEL using Ansible configuration management, enforcing consistent, version-controlled system states across 15+ production servers
- Write Python and Bash scripts to automate deployment, server configuration, maintenance, and backup workflows, reducing manual operational overhead by approximately 40% through programming automation
- Provision and manage virtual machines via cloud APIs (Azure Resource Manager API, AWS EC2 API), handling full server lifecycle from provisioning to decommissioning across 20+ VMs
- Participate in on-call rotation for production infrastructure, performing incident triage and rapid resolution with average response time under 15 minutes to maintain system reliability and business continuity
- Troubleshoot complex Linux and infrastructure incidents, delivering timely resolution including computer hardware fault diagnosis and server hardware repair when physical servers are involved
- Implement and maintain Zabbix monitoring for production server infrastructure, configuring alerts and dashboards that reduced mean-time-to-detection by approximately 30%

Datacom NZ

Auckland, New Zealand

Intern

April 2025 – June 2025

- Supported CI/CD pipeline development on Azure DevOps for .NET and React applications, streamlining automated deployments in a delivery-focused engineering environment and reducing deployment time by approximately 25%
- Collaborated with senior engineers to improve deployment reliability, application performance, and development workflow practices across 3 project teams

Mitre10 MEGA

Auckland, New Zealand

Security Team Member

August 2025 – Present

- Maintained secure facility operations across a large retail site; continued self-directed study of Azure fundamentals, Zabbix monitoring, and DevOps tooling concurrently during shifts.

KEY PROJECTS

Cloud Deployment & Infrastructure Automation

- Deployed production-grade web applications (Next.js, .NET, Node.js) to Azure and AWS using cloud-native automation services and API-driven provisioning in a production environment, achieving deployment times under 10 minutes end-to-end.
- Completed a client technical assignment deploying a Next.js dashboard to AWS Amplify, demonstrating end-to-end cloud deployment proficiency with zero-downtime releases.

Infrastructure, Package Building & Disaster Recovery

- Configured and maintained Azure VMs and VPS servers; compiled software packages from source and created custom debs for deployment to Ubuntu servers, reducing installation time by approximately 60%.
- Developed Bash and Python automation scripts for server administration, scheduled maintenance tasks, and critical offsite backup workflows, achieving backup completion rates of 100% across production systems.

Continuous Linux & DevOps Programming Practice

- Completing 100-day DevOps engineering challenge on KodeKloud Engineer platform; daily Linux troubleshooting and server administration practice on sadservers.com, solving 50+ real-world scenarios.
- Focus on real-world system diagnostics, on-call simulation scenarios, and Python programming for automation, including Zabbix monitoring server configuration exercises and CentOS Linux administration tasks.

VOLUNTEER EXPERIENCE

FreeCodeCamp.org — Staff Member

- Curated Linux, virtualisation, and cloud computing learning resources for web and YouTube publication; gained hands-on experience with Linux virtualisation and Hyper-V, contributing to resources used by 1000+ learners

Shoutcoder.com — Technical Support Analyst

- Provided client support for cPanel/WHM Linux hosting environments in a production environment via WHMCS ticketing, live chat, and email; managed cloud backup storage solutions and troubleshoot server-side issues, resolving 200+ support tickets with a 95% satisfaction rate

EDUCATION

Unitec Institute of Technology

Auckland, New Zealand

Master of Applied Technologies — Data Analysis (Level 9)

Feb 2023 – July 2024

- Provided hands-on IT helpdesk support in a production environment: computer hardware installation, upgrades, and fault diagnosis for computers, printers, and networking peripherals across campus, resolving 300+ support requests

Maharaja Surajmal Institute

New Delhi, India

Bachelor of Computer Applications

2019 – 2022

- Built foundational skills in Python programming, Linux deployment, and Bash automation; completed projects in web and Windows automation

ADDITIONAL INFORMATION

- **Languages:** English (fluent), Hindi (native)
- **Interests:** Path of Exile (active player), Site Reliability Engineering, Linux systems, hardware innovation and troubleshooting
- **Working Rights:** New Zealand Post-Study Work Visa, valid until August 2027
- **On-Call Availability:** Fully willing to participate in on-call rotation and after-hours incident response in a production environment.
